

I find it very disturbing that the National Association of Broadcasters has a say in what I am paying to listen to. Satellite radio is not free! I am paying good money for this service and don't feel that any organization should be able to censor or mandate what I listen to. The instant traffic and weather are two great features of XM radio that I listen to religiously. Please keep your hands off. If free radio was worth listening to than everybody woudn't be subscribing to satellite radio. Focus your energy on free radio and leave us satellite subscribers alone!
